

Gibraltar Top Cop™ is a 3 oz. copper barrier for residential wood frame construction. It works extremely well as a termite shield and thru-wall flashing on wood framed construction. New preservatives such as Alkaline Copper Quaternary (ACQ) used on pressure treated lumber create a compatibility concern between aluminum or galvanized flashing and treated lumber.

Gibraltar Top Cop™ is a laminated thru-wall flashing. Do not attempt to delaminate **Top Cop™**: the crepe reinforced backing adds strength and stability to the 3 oz. copper. It is flexible and is easily cut and formed by hand at the jobsite.

Gibraltar Top Cop™ should be installed with the copper side facing the plywood sheathing and the crepe reinforcement facing out.

Use as a Ledger Flashing when working with ACQ Treated Lumber.

Use as a Sill Flashing or Termite Barrier

- UV resistant for the life of the structure
- Used on deck applications, window sills and other openings
- Easy to form on-site, cuts easily with scissors
- Two layers of self-sealing protection
- Compatible with all ACQ pressure treated wood
